**Inclusion Criteria.** Each index is derived from an underlying index published by S-Network Global Indexes that is defined by the relevant region and capitalization sector. The Thomson Reuters/S-Network ESG Best Practices Indices are constructed to be sector-neutral to their underlying indices. They are also constructed to have consistently higher ratings as measured by the Thomson Reuters/S-Network ESG Best Practices Ratings. Using the ESG Ratings, which are based on data provided by Thomson Reuters ESG Data, half of the companies in each of the ten Thomson Reuters Business Classification (TRBC) sectors in the underlying index are included in the relevant Best Practices index.

**Weighting Methodology.** Eligible stocks are weighted within each sector based on a combination of their float-adjusted market capitalization and their relevant Best Practices Rating. Company weights within each sector are then modified by the sector weight of the underlying Index.

**Rebalancing.** The Thomson Reuters/S-Network ESG Best Practices Indices are rebalanced quarterly on the third Friday of the last month of each calendar quarter and reconstituted annually on the third Friday of December.

**Index Data.** The Thomson Reuters/S-Network ESG Best Practices Indices are calculated by Thomson Reuters PLC. Price-only index values are distributed throughout the day at fifteen second intervals in both USD and EUR. Total return and net total return index values are distributed once daily, immediately following the close of trading on US stock markets on each business day.
